

MOBILEDETECT

Advanced Drug and Threat Detection Field Test Kits

Tactical Supply Pakistan

What is MobileDetect?

A free, all-in-one threat assessment app

MobileDetect is a free and optional detection and identification app that captures test results from our patented field drug test kits. The MobileDetect platform also powers the Apex^{R7} Raman Spectrometer, giving first responders a complete threat assessment toolkit.

Download the app with the QR codes below, and scan the test kits in this book to see our incredible reporting and analysis capability in action!

Download on the
App Store

GET IT ON
Google Play

Optional App

The MobileDetect app is an optional, supplemental tool. Every test kit can be run and analyzed without the app if desired.

Better field drug tests

Multi-Drug Test

Also known as the MDT, this flagship MobileDetect test pouch screens for several drugs at once and is ideal for unknown white powders. The MDT is a must-have in every toolkit.

Substances Detected:

Bulk fentanyl, meth, amphetamines, heroin, opiates, cocaine and MDMA.

Scan it now!

Download the free MobileDetect App and scan the above MDT test pouch right now. On the app, select 'Start Test' and scan the QR code on the test kit. This will simulate a positive result for meth.

Vast library of drug test kits

The Multi-Drug Test is just one of the many test pouches we offer! Check out our website for our full catalogue, including tests for:

THC
CBD
DMT
Meth

Cocaine
Heroin
Synthetics
Fentanyl

Opiates
LSD
GHB

PCP
Xylazine
Ketamine

Easy, point-and-shoot substance identification

Powered by the MobileDetect app or SEEKER Pro, the Apex^{R7} lets users scan and identify unknown substances in seconds.

Power and price meet

The Apex^{R7} makes accurate substance identification affordable. For less than the price you pay for competitor devices, you get:

- Unbeatable 24,000 library items and counting
- Lightning-fast results in 10 seconds or less
- Free reporting and analysis with the MobileDetect App
- Developed with the U.S. DOD to run on next-gen ATAK and CivTAK platforms
