Mistral Forensic Products - Providing a Complete Forensic Arsenal

Description

Mistral forensic products are unique tools for law enforcement and security agencies and provide a complete Forensic Arsenal.

Mistral Security's Forensic products do not replace latent print powders or other forensic tools but rather supplement other technologies for use under special circumstances or on unusual conditions such as wet, porous, or oily surfaces. Mistral's products work on salts, fats, or proteins left by fingerprints or skin that has touched surfaces; giving investigators a more complete capability to detect and visualize latent prints or trace evidence that may not otherwise be detected.

Features

- Several of the aerosols come in regular (100 ml) and larger (up to 300 ml) sizes
- Test results are quick and accurate
- Products are very sensitive
- Work under most temperature conditions
- Several products have aerosolized common CSI tools such as pre-mixing Ninhydrin and SPR solutions

Applications

- Crime scene investigations
- CSI/CID/NCIS Units
- State, County and Municipal Forensics laboratories
- Battlefield Forensics

Aerosol	Applications	Test Response Time
	<p>ALLPRINT - Fingerprint visualization. Works on light, non-porous, dry or wet surfaces, as well as plastic or oily surfaces.</p>	<p>From 10 to 30 seconds</p>
	<p>BLUE - Shoe print visualization. Works on non-porous surfaces such as hardwood, concrete, and linoleum floors.</p>	<p>From 10 to 30 seconds</p>
	<p>CRYSTAL VIOLET - Fingerprint visualization. Works on sticky or adhesive surfaces treated with cyanoacrylate ("super-glue"). Aerosol brings out (and speeds up) the print colored by the sprays reaction to the cyanoacrylate.</p>	<p>From 10 to 30 seconds</p>
	<p>FERROTRACE - Visualization of skin surfaces with iron trace residue from handling weapons with iron components.</p>	<p>From 20 to 60 seconds (perhaps longer in some situations) – visualization continues to get stronger.</p>
	<p>GSPR - Gunshot Powder Residue detection. Designed to be quick, easy, and effective.</p>	<p>Within 10 seconds</p>

Aerosol	Applications	Test Response Time
	<p>SPR BLACK AND WHITE - Visualization of fingerprints on wet surfaces or even in rain. SPR BLACK works on white surface backgrounds, and SPR WHITE works on dark backgrounds.</p>	From 10 to 30 seconds
	<p>UV TRAP - A marking system that applies an invisible chemical to surfaces that, when touched, will leave an invisible layer of the chemical on the skin that can then be seen with "black light" or UV light.</p>	From 10 to 30 seconds
	<p>See Through - A remarkable investigate product. It is a transparency spray that allows one to see the contents of closed envelopes or manila folders without damaging the envelope or folder, without damaging the contents, and will not cause inks to run. This product leaves no marks when used. No one will know that the product was used. This product is an excellent addition for crime scene forensics and has applications for security facilities and correctional institutions.</p>	Few seconds
