

GENERAL SPECIFICATIONS

Reel Length:	91m, 300 ft
Pole Length Min.:	0.91m, 3 ft
Pole length Max:	3.2 m, 10.6 ft
Reel Weight:	11 KG, 24 lbs
Pole and Shield Weight:	2.3 KG, 5 lbs
Claw Width:	27 cm, 11 in
Claw Clamping force:	34 KG, 75 lbs
Dragging Capacity:	27 KG, 60 lbs (surface dependant)
Battery life:	4+ hours
Power Source:	Rechargeable 24V, 6.4 Amps
Operational Temperature:	+50 C (122F) to -40 C (-40F)

DESCRIPTION

EOD Falcon is an innovative take on the traditional hot stick, designed for remote retrieval of devices. The operator now has the capability to distance themselves from the package while manipulating it from a safe distance. The claw is attached to a pole that can extend up to 3.2m (10.6ft), enabling the operator to safely place the claw in the desired location. From there, the operator can remotely open and close the claw from up to 91m (300ft) away, effectively reeling the package out of its confined space.

The EOD Falcon is specifically designed for use in confined spaces where robotic operation is not feasible. Whether there's an object on top of a small staircase or underneath a low vehicle, the EOD Falcon provides the ideal solution for limited spatial situations.

So, why choose the EOD Falcon over a rigging kit? It offers quick and easy deployment, allowing you to avoid manipulating the package at close range. With the EOD Falcon, all device manipulation is conducted remotely from a safe distance, ensuring maximum safety.
