BLASTSAFE: FULLY CONFINED VESSELS

Mobile Explosive Containment Vessels

Mistral Security, Inc.'s Explosive Containment Vessels provide full protection against blast and fragmentation. The Golan series patented design is proven to safely contain, store, and protect explosives. The ARC Series models are gas-tight and are widely used by Military and Police EOD teams. Each container has been extensively tested by government authorities and/or independent laboratories and several models are approved by the U.S. Department of Defense Explosives Safety Board (DDESB).

Golan 3M

The Golan 3M explosive containment vessel is designed to safely remove or store large suspect pieces of luggage and to withstand the blast and fragmentation effects of accidental explosions of up to 3 kg TNT charges or equivalent.

Golan 5M

The Golan 5M type container offers a convenient and cost-effective solution to safely remove large suspect pieces of luggage, safely transport UXO, ammunition and other objects containing explosives. The Golan 5M is able to withstand the blast and fragmentation effects of up to 5kg TNT charges or equivalent.

Golan 10S

The Golan 10S explosive containment vessel offers a convenient and cost-effective solution for the safe transport of medium-sized ordnance and ammunition of 10kg TNT or equivalent. The unit may be used in airports, ferry terminals, mail sorting plants and more.

ARC 6GT

The ARC-6GT is designed to contain the blast effects of up to 6kg of TNT or equivalent material. The gas-tight feature of the ARC-6GT allows First Responders to mitigate Weapons of Mass Destruction that might contain chemical or biological agents. The ARC-6GT is gas-tight to full explosive capacity of the vessel.
