Various kinds of Acoustic Device

RU122X C-UAV Acoustic Detector

Microphone: 122
Passive Detection
Max Range: 500m
Weight: 3kg

This portable device uses sensitive microphones and algorithms to capture and analyze the unique acoustic signature of UAVs. It enables passive detection, classification, and localization of UAVs for enhanced perimeter security and critical infrastructure protection.

My **1-Mile** Ear

More **10-Second** initiative

RD500 Chemical Warfare Agency Detector

Typical CWA: GB/GD/VX/ HD
Screen: 3.5"OLED
Handheld
Weight: 380g

Hand-held CWA detector is suitable for single use, suitable for detecting many typical CWA, with fast detection speed and high detection accuracy. It can also be integrated and applied in dangerous scenes on unmanned platforms.

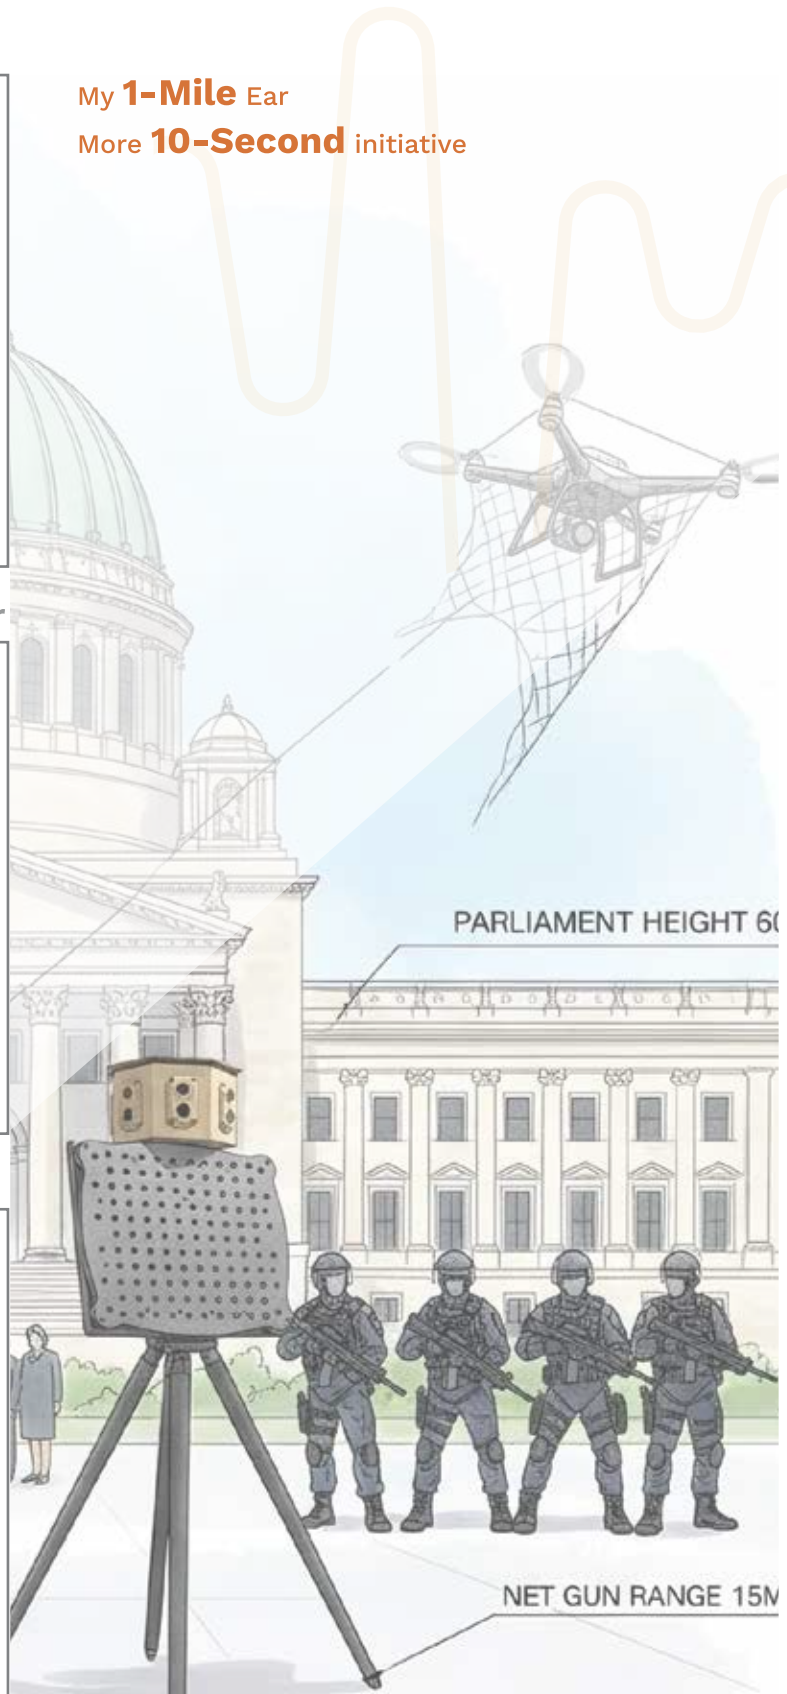

QS47 High Resolution Imaging Sonar

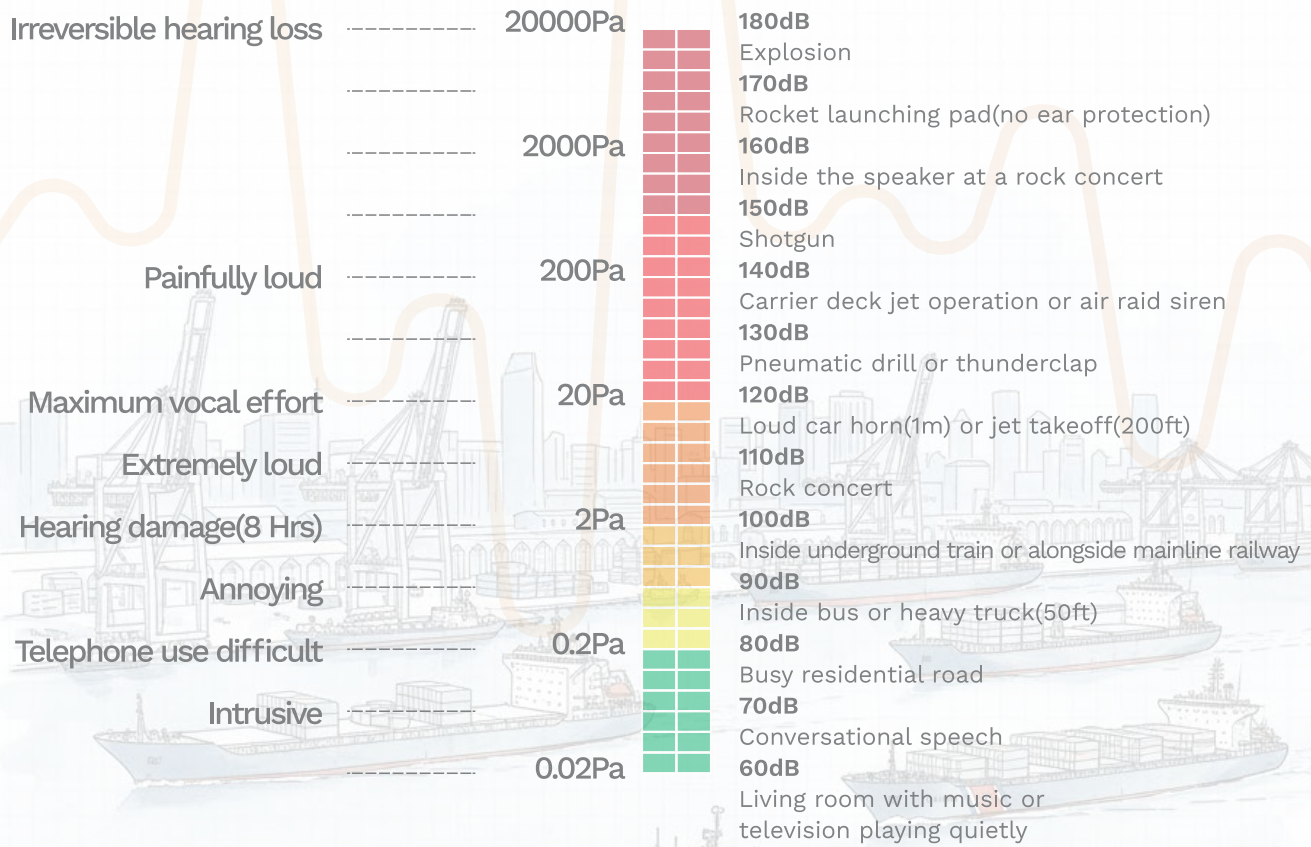

Working Frequency: 400/700kHz
Horizontal Viewing Angle: > 130°
Maximum detection angle: 30°/20°
Maximum working distance: > 150m

QS47 high-resolution imaging sonar is used to image small underwater targets and provide relevant information for underwater target detection, with dual-frequency option.

Sound Pressure Level Diagram

Peak SPL **171dB**

Continuous SPL **160dB**

Max Range **10km**

Remote Control
